Information Paper – Cyber Security Services at Sage Management

Purpose: The purpose of this Information Paper is to describe Sage Management’s experience in providing Cyber Security Services for government customers.

The Challenge: The on-going challenges of cyber-security include securely meeting new mission needs through the identification of requirements, design solutions and then bringing those solutions through the development, implementation and subsequent operation of the new system. Once operational, those challenges continue through upgrade security testing and secure system maintenance. This must be successfully accomplished in the face of evolving threats and ever more capable adversaries while dealing with constant changes in personnel and budgetary constraints.

Introduction: Sage Management has extensive experience in providing key Cyber Security solutions to classified customers. This experience includes providing policy development services, security course development and training, development and operational use of the RMF and specific capabilities delivering CND, CNE and CNO services.

- 1. Veteran-owned Small Business
2. Inc. 500 Company headquartered in Columbia, MD with locations in Virginia, New Jersey, California and Arizona
3. Focus Areas:
a. Enterprise Information Assurance Policy development
b. Development of TTPs and SOPs for analysts and operators
